Page 1278.

Due to a printer's error, a line of type was dropped from the third and fourth sentences of the introduction to this article. The complete third and fourth sentences should read:

Two mechanisms by which this can occur are adrenergic stimulation and increased heart rate, or the force-frequency effect. Studies in isolated muscle segments (1–3) and in intact hearts (4–6) have shown that both of these stimuli increase the inotropic state of the myocardium.
