J. Clin. Invest. 105:915-923 (2000).

During preparation of this manuscript for publication, an error in Figure 5 was introduced. The correct version, accompanied by the legend, appears below.

Figure 5

Trabecular bone-formation rate in tibiae of control (+/+) and osteonectin-null (-/-) mice. In vivo dual calcein labeling allows an estimate of bone-formation rate, which considers the distance between 2 fluorescent labels. Representative data from 11-week-old control (**a**) and osteonectin-null (**b**) mice are shown. Bars show mean \pm SEM ($n \ge 4$). $^{AP} < 0.01$ between control and mutant mice, as determined by 2-way ANOVA.
