

List of Supplemental Materials

Supplemental Figure 1. Serology and repertoire features of different age groups.

Supplemental Figure 2. Features of rH1and rH3-binding antibodies.

Supplemental Figure 3. Binding characteristics of the non-rHA binding s-mAbs.

Supplemental Table 1. Demographics of volunteers.

Supplemental Table 2. Expressed serum monoclonal antibodies (s-mAbs) and their specificities.

Supplemental Table 3. Glycan array binding data for top 100 glycans.

Supplemental Data Set 1 (Microsoft Excel format). Tabulated serum antibody clonotypes identified from Ig-Seq analysis.

Supplemental Figure 1. Serology and repertoire features of different age groups. (A) HAI titers to 14 historical H1N1 and 15 historical H3N2 strains. Vaccine strains are highlighted in red box. (B) Fraction of the abundance of vaccine-H1+H3 CR clonotypes in the anti-vaccine-H1 and anti-vaccine-H3 serum repertoires (Kruskal-Wallis test followed by Dunn's post-hoc test). Mean ± SD shown for each group ($n=6, 6, 8$). (C) Fraction of the number of vaccine-H1+H3 CR clonotypes in the anti-vaccine-H1 and anti-vaccine-H3 serum repertoires (Kruskal-Wallis test followed by Dunn's post-hoc test). Mean ± SD shown for each group ($n=6, 6, 8$). (D) The fraction of vaccine-H1+H3 CR clonotypes in the serological repertoire of 4 donors vaccinated in 2013-2014 and in 2014-2015 season with the identical FluZone® vaccine (A/California/07/2009, A/Texas/50/2012, B/Massachusetts/2/2012) (Wilcoxon signed-rank test, two-tailed).

Supplemental Figure 2. Features of rH1 and rH3-binding antibodies. (A) Binding specificity of anti-rH3 s-mAbs to rHAs from additional contemporary H3 strains. (B) HAI titer and binding specificity of the two s-mAbs from Donor-236 (late middle-aged) to historical group 1 rHAs. (C) s-mAbs showing a stem binding signature have microneutralization activity. N.D.: No data available. (D) 4 isolated s-mAbs showing IGHV1-69 anti-stem signatures from one middle-aged (Donor-236) and two elderly donors (Donor-29 and Donor-1131). Alignment was performed with Clustal Omega (1.2.4) multiple sequence alignment. (E) Biolayer Interferometry (BLI) data that shows competition of the two mAbs showing IGHV1-69 anti-stem signature with an anti-stem antibody, FI6v3. A head-binding antibody, 74_13_H1_1, was used as a non-competing antibody control.

Supplemental Figure 3. Binding characteristics of the non-rHA binding s-mAbs. (A) BLI data of NP-targeting s-mAbs. Average K_D and error values from $n=2$ replicates shown. (B) ELISA data showing NP and M1-targeting s-mAbs. (C) Heatmap showing specificity of 29_CR_2 to the vaccine via ELISA and the alignment to a published M2e-specific mAb (3136_G05: ADK23861.1).

Supplemental Table 1. Demographics of volunteers.

Donor ID	Birth year	Age group (Age criteria)	Vaccination season (Type)	Gender	Ethnicity
1158	1988	Young (26-33)	Fluzone® 2014-2015 (Standard-dose)	Female	White/Caucasian
