·		o include when reporting randomised crossover trials	Dago No*
Section/topic	Item No	Description	Page No*
Title†	1a	Identification as a randomised crossover trial in the title	N/A
Abstract†	1b	Specify a crossover design and report all information outlined in table 2	2
Introduction:	2-	Colontification and and analysis of attitudes	
Background‡	2a	Scientific background and explanation of rationale	3-4
Objectives‡	2b	Specific objectives or hypotheses	4
Methods:	2-	Delica de Constante de la Constante de Carlo de la Carlo de Carlo	
Trial design†	3a	Rationale for a crossover design. Description of the design features including allocation ratio, especially the number and duration of periods, duration of washout period, and consideration of	
		carry over effect	9-10
Change from protocol‡	3b	Important changes to methods after trial commencement (such as eligibility criteria), with reasons	N/A
Participants‡	4a	Eligibility criteria for participants	9
Settings and location‡	4b	Settings and locations where the data were collected	9
Interventions†	5	The interventions with sufficient details to allow replication, including how and when they were actually	
men ventions:	,	administered	10
Outcomes‡	6a	Completely defined prespecified primary and secondary outcome measures, including how and when they	
Saccomesi	ou	were assessed	10
Changes to outcomes‡	6b	Any changes to trial outcomes after the trial commenced, with reasons	N/A
Sample sizet	7a	How sample size was determined, accounting for within participant variability	9
Interim analyses and stopping	7b	When applicable, explanation of any interim analyses and stopping guidelines	
guidelines‡			N/A
Randomisation:			
Sequence generation‡	8a	Method used to generate the random allocation sequence	N/A
Sequence generation‡	8b	Type of randomisation; details of any restriction (such as blocking and block size)	N/A
Allocation concealment	9	Mechanism used to implement the random allocation sequences (such as sequentially numbered	,,,
mechanism‡		containers), describing any steps taken to conceal the sequence until interventions were assigned	N/A
Implementation†	10	Who generated the random allocation sequence,§ who enrolled participants, and who assigned	
		participants to the sequence of interventions	N/A
Blinding‡	11a	If done, who was blinded after assignment to interventions (for example, participants, care providers, those	
		assessing outcomes) and how	9
Similarity of interventions‡	11b	If relevant, description of the similarity of interventions	N/A
Statistical methods†	12a	Statistical methods used to compare groups for primary and secondary outcomes which are appropriate for crossover design (that is, based on within participant comparison)	11
Additional analyses‡	12b	Methods for additional analyses, such as subgroup analyses and adjusted analyses	10-11
Results			
Participant flow (a diagram is	13a	The numbers of participants who were randomly assigned, received intended treatment, and were analysed	
strongly recommended)†		for the primary outcome, separately for each sequence and period	19, 22
Losses and exclusions†	13b	No of participants excluded at each stage, with reasons, separately for each sequence and period	19, 22
Recruitment‡	14a	Dates defining the periods of recruitment and follow-up	N/A
Trial end‡	14b	Why the trial ended or was stopped	N/A
Baseline data†	15	A table showing baseline demographic and clinical characteristics by sequence and period	25-26
Numbers analysed†	16	Number of participants (denominator) included in each analysis and whether the analysis was by original	
			20,21,23,24
Outcomes and estimation†	17a	For each primary and secondary outcome, results including estimated effect size and its precision (such as	
		95% confidence interval) should be based on within participant comparisons.¶ In addition, results for each	
Diagram	176	<u> </u>	6,20,21,23,2
Binary outcomes‡	17b	For binary outcomes, presentation of both absolute and relative effect sizes is recommended	N/A
Ancillary analyses‡	18		6,20,21,23,2
Harmst	19	Describe all important harms or untended effects in a way that accounts for the design (for specific	
		guidance, see CONSORT for harms ³²)	6
Discussion:			
Limitations†	20	Trial limitations, addressing sources of potential bias, imprecision, and if relevant, multiplicity of analyses. Consider potential carry over effects	9
Generalisability‡	21	Generalisability (external validity, applicability) of the trial findings	7-9
Interpretation‡	22	Interpretation consistent with results, balancing benefits and harms, and considering other relevant evidence	7-9
Other information:			
Registration‡	23	Registration number and name of trial registry	2
Protocol‡	24	Where the full trial protocol can be accessed, if available	N/A
Funding‡	25	Sources of funding and other support (such as supply of drugs), role of funders	2,10

Funding ‡ 25 Sources of funding and other support (such as supply of drugs), role of funders 2,10

CONSORT=Consolidated Standards of Reporting Trials.

*Note: page numbers are optional depending on journal requirements.

†Modified original CONSORT item.

‡Unmodified CONSORT item.

\$Random sequence here refers to a list of random orders, typically generated through a computer program. This should not be confused with the sequence of interventions in a randomised crossover trial, for example receiving intervention A before B for an individual trial participant.

¶A within participant comparison takes into account the correlation between measurements for each participant because they act as their own control, therefore measurements are not independent.
