Supplemental Figure Legends

Supplemental Figure 1: Schematic of study design and workflow. (A) Tissue sections were labeled with in-situ probes for mRNA detection via a UV photocleavable linker and 4 fluorescently labeled morphology markers; pan-CK (cyan), CD31(yellow), α -SMA (magenta), and the DAPI (blue). (B) Heatmap displaying normalized read counts for control and IPF samples. (C) PCA plot depicting the distribution of control ($n = 12$ ROIs) and IPF samples ($n = 12$ ROIs).

Supplemental Figure 2: Gene expression of Acta2 and Col1a1 in lungs of mice treated with IgG1 control or ipilimumab ($n = 6$ per group). Data are reported as mean \pm SEM; statistical differences were tested using a paired Student's t-test (two-tailed).

Supplemental Figure 3: Analysis of CTLA4-expressing CD8+ T cells in lungs of IgG1 and Ipilimumab treated groups. Data are reported as mean \pm SEM; statistical differences were tested using a paired Student's t-test (two-tailed). (A) Experimental outline of humanized CTLA4 mice subjected to repetitive bleomycin injury induced pulmonary fibrosis via oropharyngeal administration of bleomycin (1.25 U kg⁻¹ body weight), two doses, 14 days apart. On day 21 after the 2nd dose, mice were treated intraperitoneally with either control IgG1 isotype or the anti-CTLA4 monoclonal antibody ipilimumab at doses of 5 mg kg⁻¹ body weight twice per week for 4.5 weeks (total of 9 doses). (B-C) Representative flow cytometry plots of lung cells isolated from IgG1 and ipilimumab treated groups and stained for CD45, CD3, CTLA, and CD8. (D) Bar graph depicting percentage of CTLA4 expressing CD8+ T cells from IgG1 isotype control and ipilimumab treated groups from B-C. Data are reported as mean \pm SEM; statistical differences were tested using a paired Student's t-test (two-tailed).

Supplemental Figure 4: Cell type annotation and relative proportions from scRNA-seq of IgG1 and ipilimumab treated groups.

Supplemental Figure 5: Multiplex IHC staining of lungs from IgG1 control and ipilimumab treated mice. (A) Representative multiplex IHC staining with α -SMA (green), pro-SPC (yellow), CD8 (cyan), and CTLA4 (red) in IgG1 group.(B) Representative multiplex IHC staining with α -SMA (green), pro-SPC (yellow), CD8 (cyan), and CTLA4 (red) in the ipilimumab treated group.

Supplemental Table 1: Ingenuity pathway analysis (IPA) of differentially expressed genes between IPF and control lungs.

Supplemental Table 2: Differences in protein expression within regions of interest (ROIs) in control vs. IPF lungs ($n = 12$ ROIs in each group).

Supplemental Table 3: Differentially expressed genes in the AT2 cell cluster, comparing ipilimumab and control IgG1 treated mice ($n = 3$ per group).

Supplemental Video 1: Representative video of CD8+ T cell mediated killing of SPiDER- β -GAL positive lung cells from bleomycin injured mice (based on protocol depicted in Figure 4D). CD8+ T cells and SPiDER- β -GAL+ cells were isolated from bleomycin-injured mice and co-cultured in a 1:2 ratio for 14 h with or without ipilimumab.

Supplemental Table 3: Differentially expressed genes in the AT2 cell cluster, comparing ipilimumab vs. control groups
