5

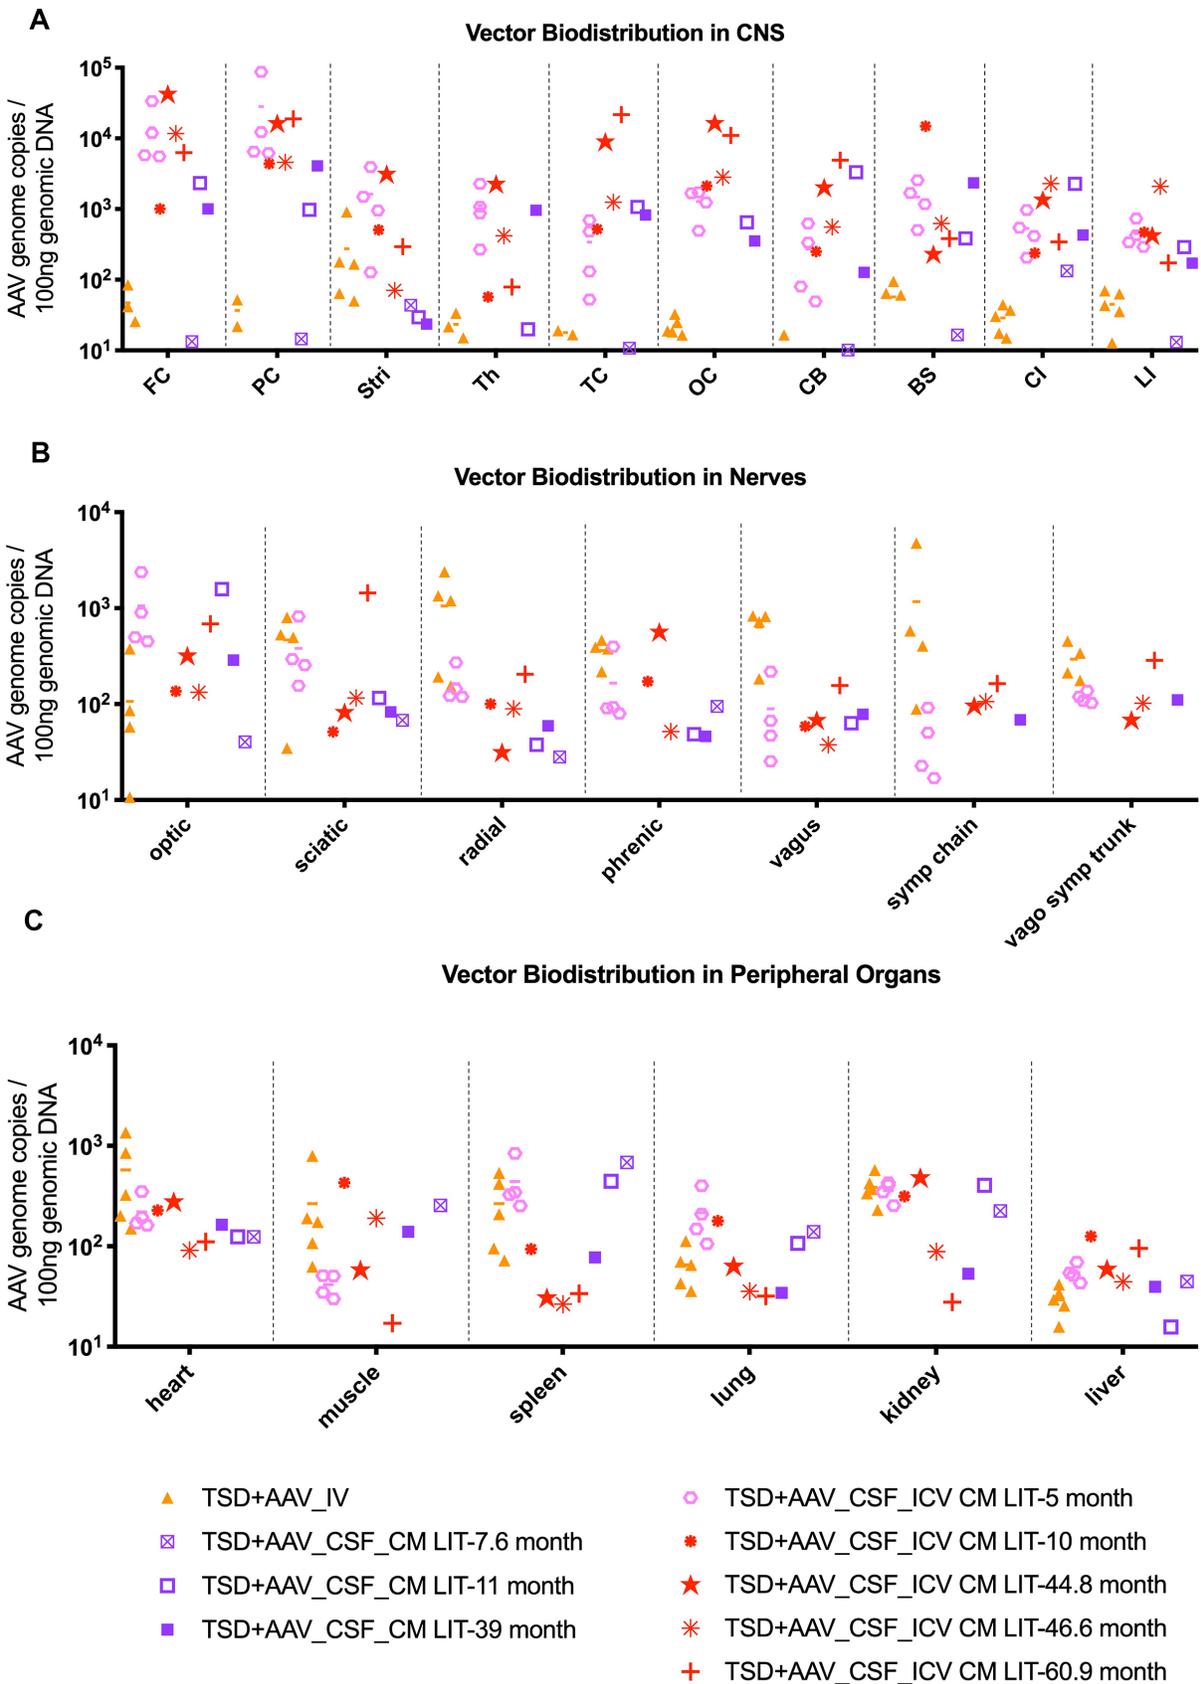

6

7

8 **Supplemental Figure 1: Serum HexA and Radial Diffusivity as biomarkers of efficacy. A.**

9 HexA in serum over the lifespan of AAV treated sheep compared to normal and TSD control
 10 sheep. **B.** Radial Diffusivity (RD) in the caudal internal capsule. Kruskal-Wallis test followed by
 11 Dunn's multiple comparisons was performed for statistical analysis. For DTI analysis, each sheep
 12 imaged one time at the endpoint and DTI analysis was performed to determine RD. **C.** Correlation
 13 of RD with GM2 measured in CSF ($p=0.0022$). Correlation analysis was performed by Spearman
 14 test.

15

17 **Supplemental Figure 2: Biodistribution of AAV in sheep. A.** CNS biodistribution of AAV9 in
18 the frontal cortex (FC), parietal cortex (PC), thalamus (Th), temporal cortex (TC), occipital cortex
19 (OC), cerebellum (CB), brainstem (BS), cervical intumescence (CI) and lumbar intumescence
20 (LI). Short term TSD+AAV_CSF_ICV-CM-LIT cohort (pink hexagon) had significantly higher vg
21 in FC, PC and OC as compared to TSD+AAV_IV cohort. **B.** Optic nerve in short term
22 TSD+AAV_CSF_ICV-CM-LIT cohort (pink hexagon) had significantly higher vg as compared to
23 TSD+AAV_IV cohort **C.** No significant difference between vg of short term TSD+AAV_CSF_ICV-
24 CM-LIT cohort (pink hexagon) and TSD+AAV_IV cohort in analyzed peripheral organs. Kruskal-
25 Wallis test followed by Dunn's multiple comparisons was performed for statistical analysis in all
26 panels. Assays were repeated at least three times. Abbreviations: Symp. Chain (sympathetic
27 chain). Vago symp trunk (vagosympathetic trunk).

36

37 **Supplemental Figure 3. Assessment of vector biodistribution in frontal cortex of 60.9-**
38 **month-old sheep. A.** RNAscope to the bici promoter (green). **B.** Representative image of sheep
39 frontal cortex. **C-D.** Vector biodistribution in long term treated sheep TSD+AAV_CSF_ICV-CM-
40 LIT. Scale bar, 100 μ m. Assays were repeated at least three times.

41

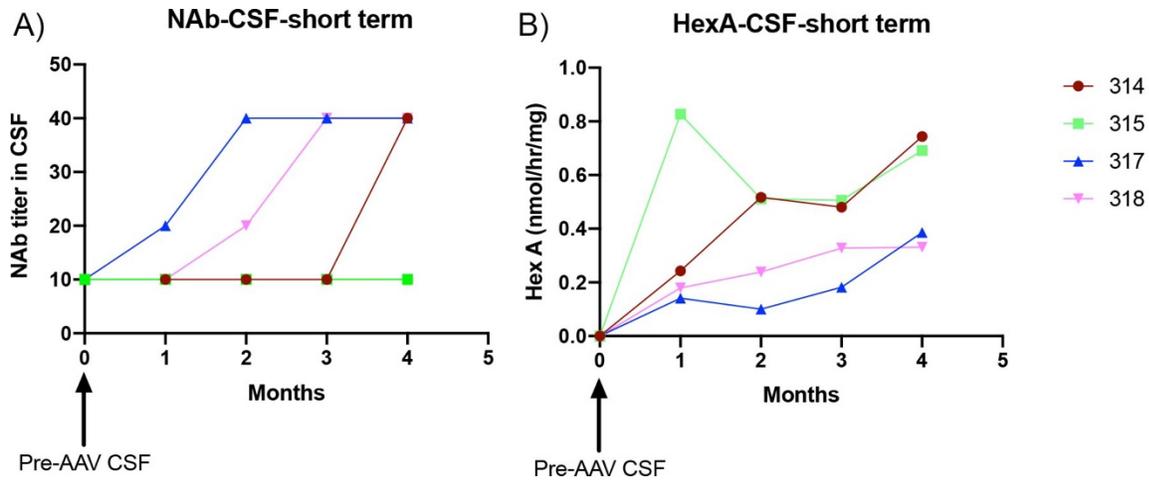

43

44 **Supplemental Figure 4. Off target assessment in tendons and ligaments: A-B.** Tendon
 45 injuries in TSD+AAV_IV treated cohort. **C.** Hex A activity in intervertebral disc, tendon, and
 46 cartilage (** $P < 0.009$). **D.** total Hex activity in intervertebral disc, tendon, and cartilage (* $P < 0.028$;
 47 ** $P < 0.008$). **E.** vector biodistribution in disc, tendon, and cartilage. Kruskal-Wallis test followed
 48 by Dunn's multiple comparisons was performed for statistical analysis in all panels. Assays were
 49 repeated at least three times.

50

51

52

53

54 **Supplemental Figure 5: Neutralizing antibody titer and HexA levels in CSF of individual**

55 **sheep in the short-term treated TSD+AAV_CSF_ICV-CM-LIT cohort. A.** Nab titers against

56 **AAV9 before and up to 4 months after CSF administration of AAV in CSF. B.** HexA levels before

57 **and up to 4 months after CSF administration of AAV in CSF. The 4 sheep in the short term cohort**

58 **are represented by pink hexagon in the HexA, GM2, qPCR plots.**

70

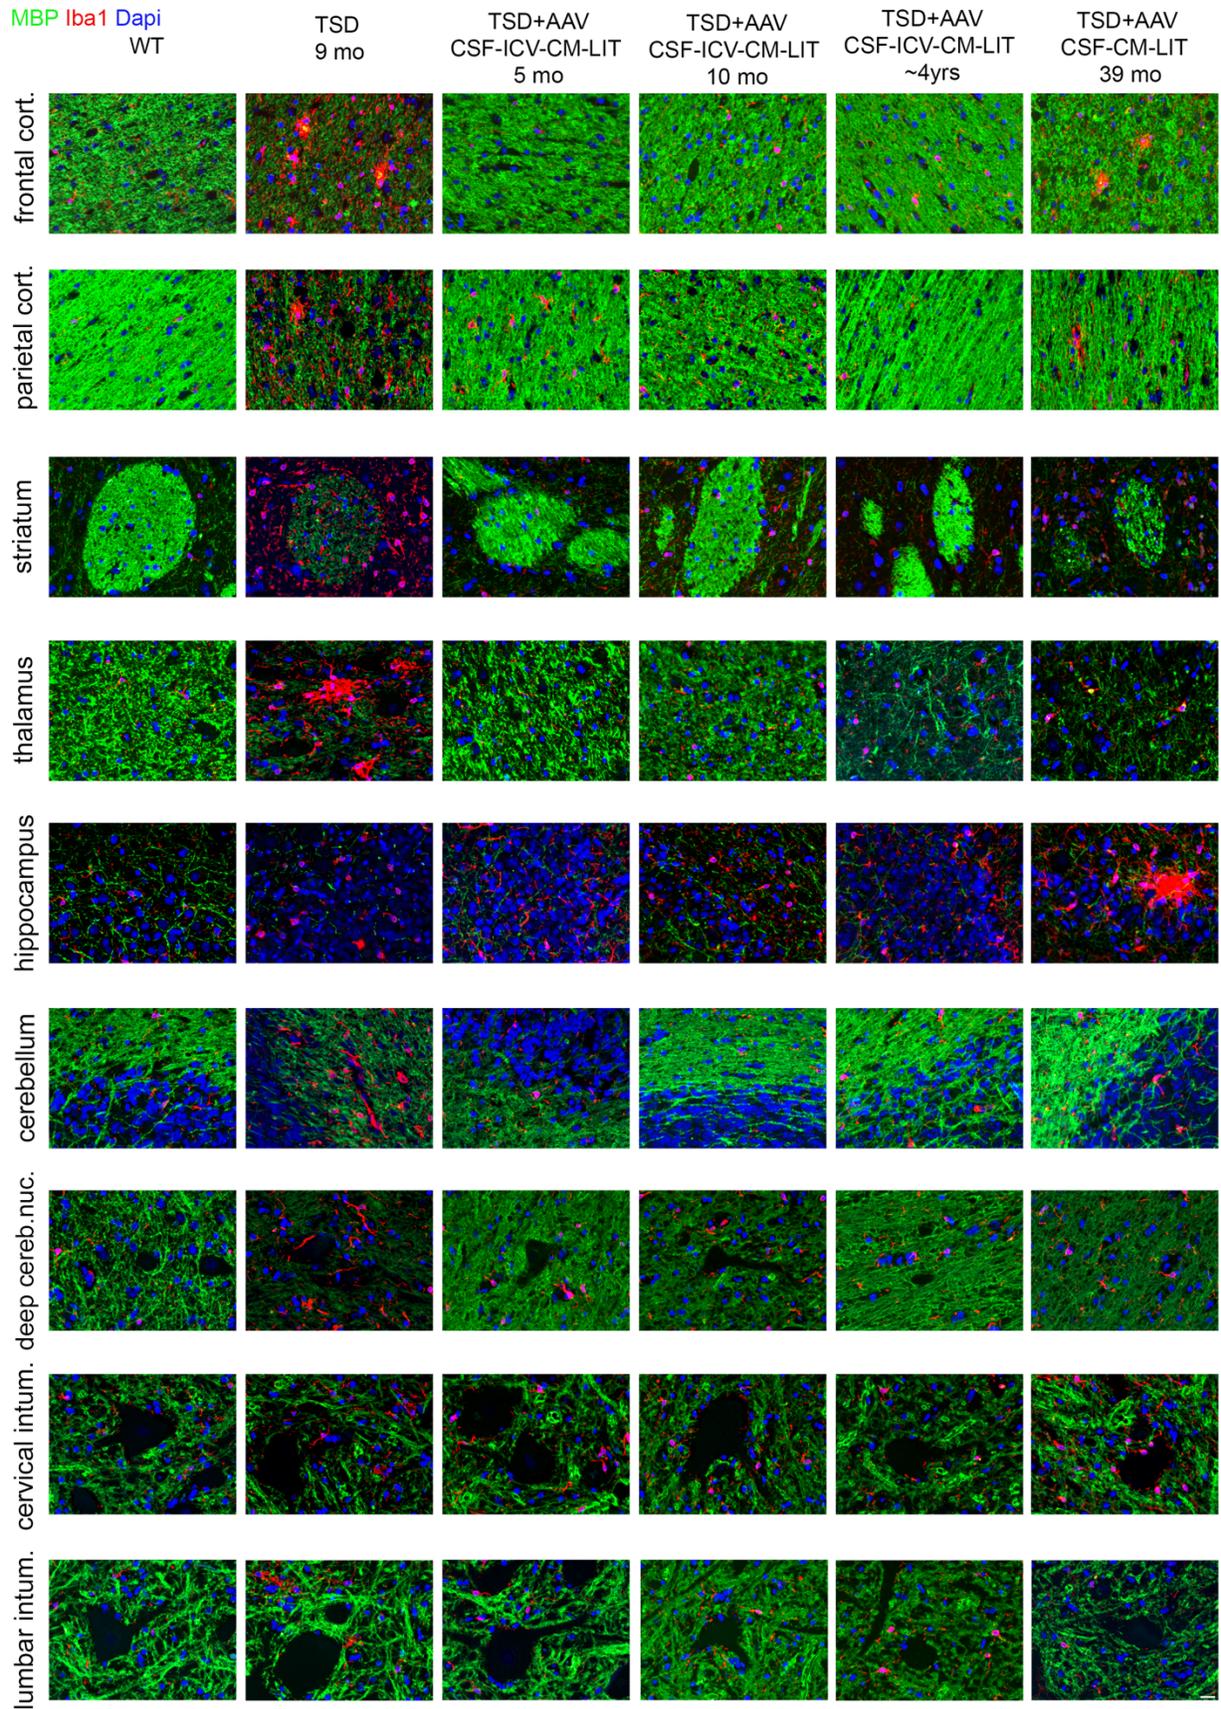

72 **Supplemental Figure 6: Hematoxylin and eosin–stained (H&E) sections of brain for all**
73 **cohorts of sheep in the study.** Morphological improvement noted in all treated groups
74 throughout the CNS despite animals reaching humane endpoint. Scale bar, 25 μ m.
75

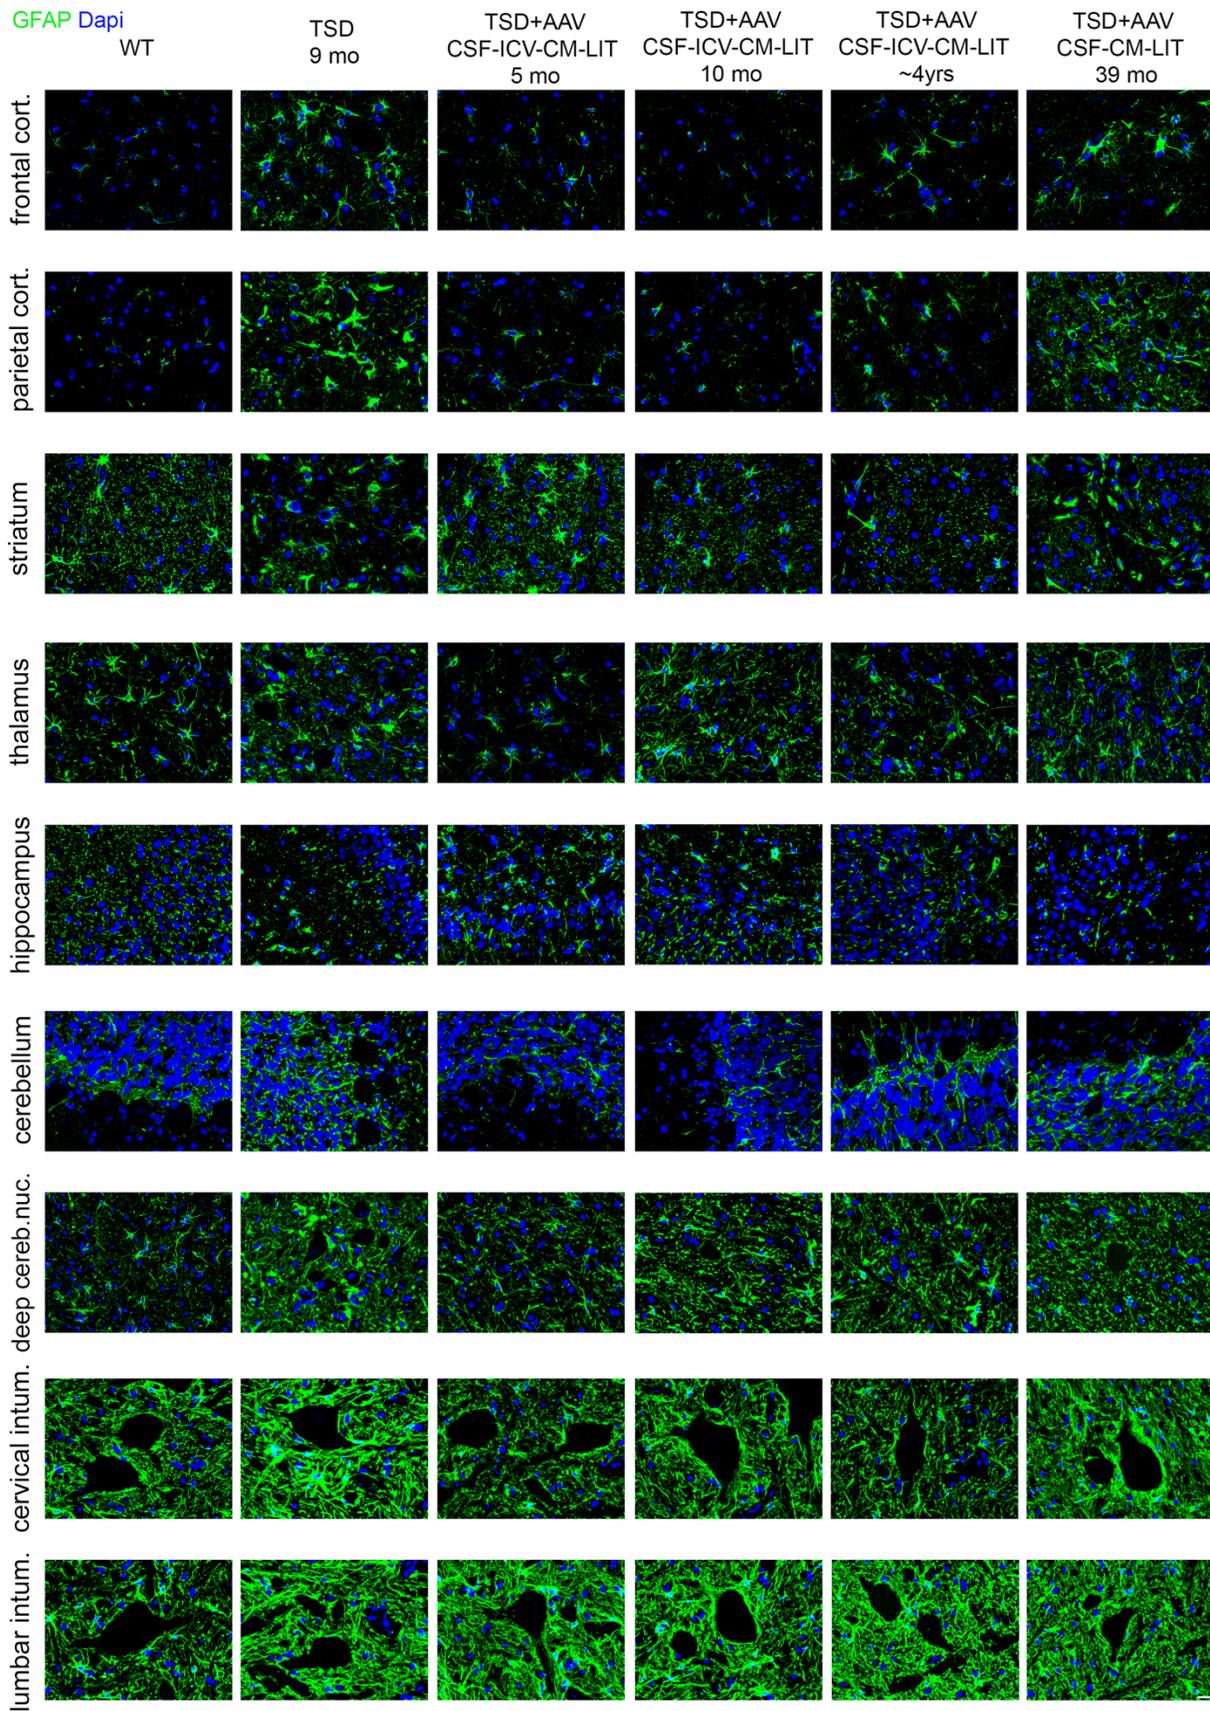

77 **Supplemental Figure 7: Neuronal and Oligodendrocyte immunofluorescence of all**
78 **analyzed CNS sections.** In addition to brain regions shown in Figure 6, this figure illustrates
79 images of additional evaluated brain regions. **MAP2**, **Olig2** and **Dapi** staining in various regions
80 of brain and spinal cord. Scale bar, 20 μm .

81

83 **Supplemental Figure 8: Myelin and microglial immunofluorescence of all CNS sections.** In
84 addition to brain regions shown in Figure 7, this figure illustrates images of additional evaluated
85 brain regions. **MBP**, **Iba1** and **Dapi** staining in various regions of brain and spinal cord. Scale bar,
86 20 μm .

88 **Supplemental Figure 9: Astrocyte immunofluorescence of all CNS sections.** GFAP and Dapi
89 staining in various regions of brain and spinal cord. Scale bar, 20 μ m.

103 **Supplemental Figure 10: DRG morphology, HexA activity and biodistribution**

104 **A.** H&E of

105 DRG in 9-month-old TSD sheep as compared to 10-month-old TSD+AAV_CSF-ICV-CM-LIT

106 sheep. **B.** HexA expression. **C.** vector biodistribution in DRGs at level of CI and LI of spinal cord.

107 Ordinary one-way ANOVA with Sidak's multiple comparison were used for statistical analysis in

108 B and C. Assays were repeated at least three times.

109

110

111

112 **Supplemental Videos 1: Sheep gait assessment. A.** WT sheep **B.** Untreated TSD sheep near
113 endpoint **C.** TSD+AAV_CSF_ICV-CM-LIT 5 years after gene therapy #212. **D.**
114 TSD+AAV_CSF_ICV-CM-LIT 4 years after gene therapy #271.

115

116 **Supplemental Videos 2: Sheep in maze A.** WT **B.** TSD **C.** TSD+AAV_IV **D.** TSD+AAV_CSF-
117 ICV-CM-LIT
