Silvia Buonamici and Donglan Li contributed equally to this manuscript.

The authors regret this error.

## Corrigendum

**Rap1b is required for normal platelet function and hemostasis in mice**

Magdalena Chrzanowska-Wodnicka, Susan S. Smyth, Simone M. Schoenwaelder, Thomas H. Fischer, and Gilbert C. White, II

Original citation: *J. Clin. Invest.* **115**:680–687 (2005). doi:10.1172/JCI200522973.

Citation for this corrigendum: *J. Clin. Invest.* **115**:2296 (2005). doi:10.1172/JCI200522973C1.

Figure 1E is incorrect in that the labels "Rap1a" and "Rap1b" were reversed, indicating a lack of Rap1a expression in the Rap1b-null lane. The correct version of Figure 1E follows.

The authors regret this error.

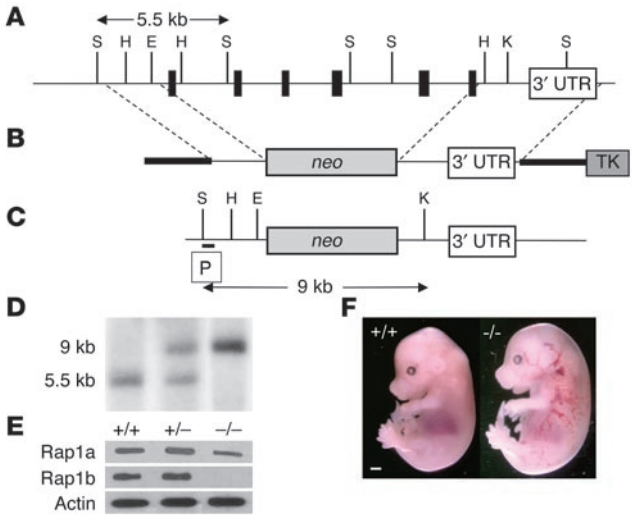

**Figure 1**
Targeted inactivation of the *rap1b* gene. (**A**) The murine *rap1b* gene consists of 6 coding (bands) and 1 untranslated exon (3′ UTR, open box). (**B**) The targeting vector contains 7.8 kb of genomic DNA flanking the neomycin-resistance cassette (*neo*). TK, thymidine kinase. (**C**) After homologous recombination, the *neo* cassette replaces the complete coding sequence of the *rap1b* gene. (**D**) Southern blot analysis of mouse tail DNA from heterozygous intercrosses digested with *SspI* and *KpnI* using a probe (P) that detects 5.5-kb and 9-kb fragments in the wild-type and knockout allele, respectively. (**E**) Western blot analysis of protein expression in platelets of indicated genotype. (**F**) Morphology of E15.5 wild-type (+/+) and Rap1b-null (–/–) embryos. Scale bar: 1 mm. E, *EcoRI*; H, *HinDIII*; K, *KpnI*; S, *SspI*.
