```

Supplemental Figure Legend

Figure S1. Equations supplied to non-linear curve fitting software

The equations shown were derived from the equations describing the models in methods, using Mathematica software.

- A. The equations for the one-compartment model were derived for use in Graphpad Prism software. The variable x is the time variable in days.
- B. The equations for the two-compartment model were derived for use in OriginPro software.

Table S1
Complete Model Parameters
