

822 **Supplemental data**

823 **Supplemental Figure 1.**

824 RAGE-binding inhibition with anti-longistatin or anti-RAGE. BSA or RAGE was coated onto wells and
825 treated without or with anti-RAGE (1:100). Longistatin was neutralized without or with anti-longistatin
826 (1:100) and added into the wells. After washing, bound longistatin was detected. $n=3$, ** $p<0.01$.

827 **Supplemental Figure 2.**

828 Comparison of longistatin binding with other RAGE ligands. Equal amounts (5 $\mu\text{g}/\text{ml}$) of longistatin or
829 each of other RAGE ligands were coated and blocked as indicated. Then, RAGE (2 $\mu\text{g}/\text{ml}$) was added
830 and binding was detected with anti-RAGE (1:500). Long, longistatin; CML, CML-BSA; and Gla, Gla-
831 BSA.

832 **Supplemental Figure 3.**

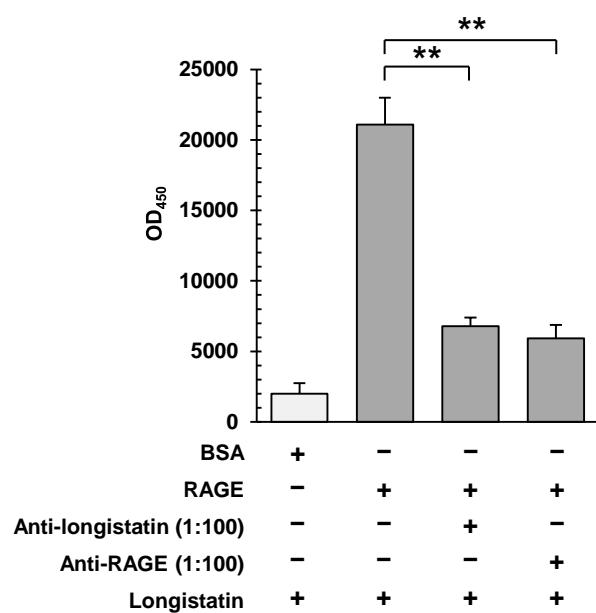

833 Binding of longistatin with the different fractions of HUVECs. HUVECs were cultured and subcellular
834 fractions were harvested. Equal amounts of protein (20 $\mu\text{g}/\text{ml}$) were coated and wells were treated with
835 longistatin (4 $\mu\text{g}/\text{ml}$) and binding was determined. $n=3$, * $p<0.01$.

836 **Supplemental Figure 4.**

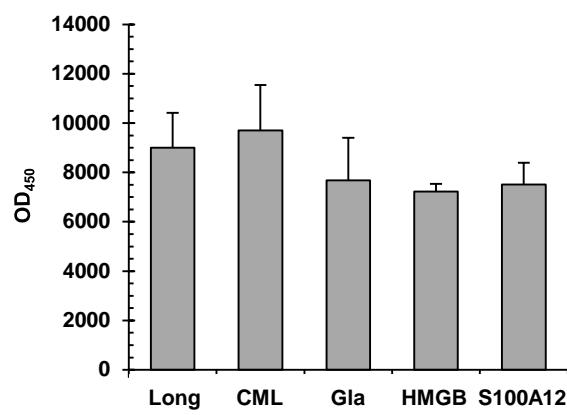

837 Anti-sRAGE inhibits interaction of longistatin with HUVEC lysate. HUVEC whole-cell lysate (20 μg)
838 was coated onto an ELISA plate, and treated with sheep anti-sRAGE at various concentrations (0-1:100).
839 Longistatin was added to the wells and incubated, and bound longistatin was probed.

840 **Table S1. List of the PCR primers**
